

Data Flow Diagram and User Stories

Project: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

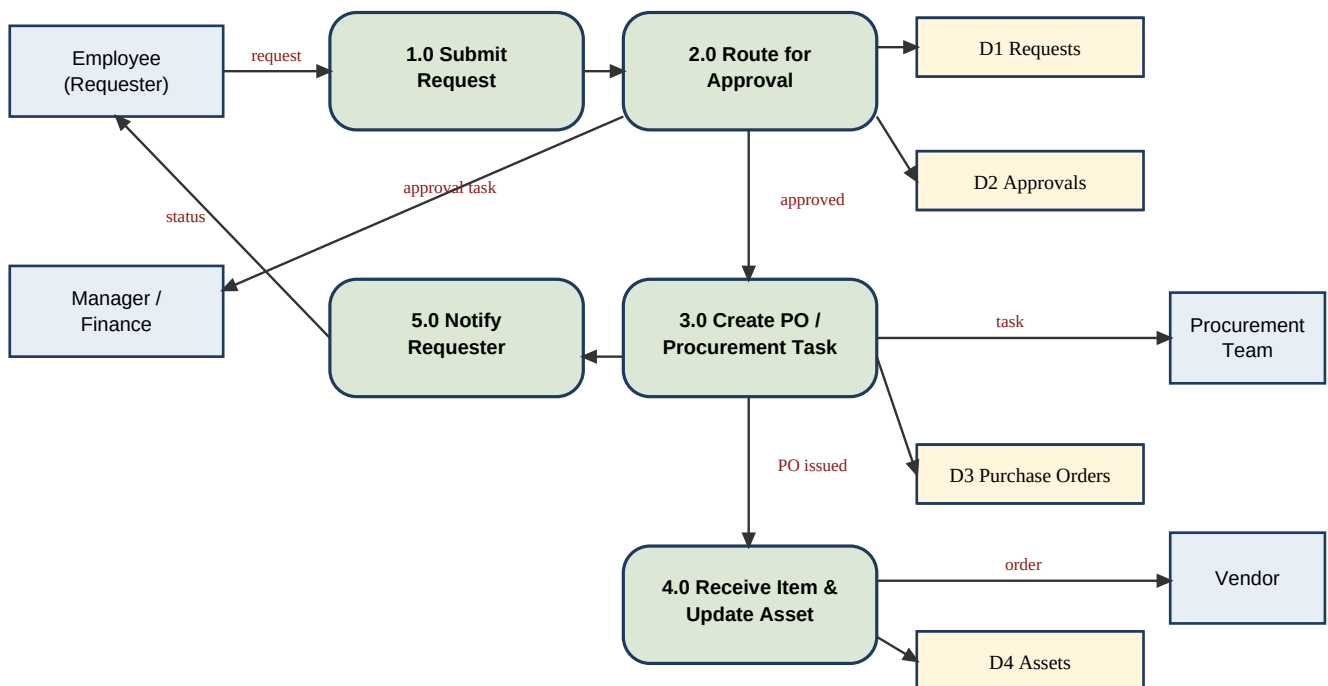

Phase: 2. Requirement Analysis

The diagrams show how procurement data moves between people, the automated flow and ServiceNow tables. Level 0 is the context view; Level 1 breaks the system into its main processes.

Level 0 - Context Diagram

Level 1 - Process Breakdown

Data Stores

ID	Data store	ServiceNow table	Key data
D1	Requests	sc_request / sc_req_item	Requester, item, quantity, cost, justification, state
D2	Approvals	sysapproval_approver	Approver, decision, comments, date
D3	Purchase Orders	proc_po / proc_po_item	PO number, vendor, amount, expected delivery
D4	Assets	alm_hardware / alm_asset	Serial number, model, assigned user, state

User Stories

ID	As a...	I want to...	So that...	Priority
US-01	Employee	raise an IT procurement request from a catalog form	I do not depend on emails or spreadsheets	High
US-02	Employee	track my request status and get notifications	I know when to expect my item	High
US-03	Manager	approve or reject requests from email or portal	decisions are fast and recorded	High
US-04	Finance approver	be involved only when cost exceeds a set limit	high-value spend is controlled without slowing small orders	High
US-05	Procurement officer	get a PO task auto-filled with request data	I avoid manual re-entry and errors	High
US-06	Procurement officer	have overdue approvals escalated automatically	requests do not stall	Medium
US-07	Asset manager	see an asset record created when items are received	inventory stays accurate	Medium
US-08	IT head	view reports of spend, cycle time and pending requests	I can improve the procurement process	Low
