

# Scalability & Future Plan

**Project:** Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

## 1. Scalability

Because the logic is built as reusable subflows and actions, the same design can handle more requests and more request types without rebuilding. Approval groups, models and SLA values are kept configurable, so changes need no code updates.

## 2. Future Enhancements

| No. | Enhancement                                               | Benefit                                        |
|-----|-----------------------------------------------------------|------------------------------------------------|
| 1   | Extend the flow to monitors, keyboards and mobile devices | One reusable process for all standard hardware |
| 2   | Automatic stock check against inventory before approval   | Fewer failed or delayed orders                 |
| 3   | Auto-approval for low-cost standard models                | Faster delivery for routine requests           |
| 4   | Vendor purchase order integration                         | Removes manual PO creation                     |
| 5   | Dashboard for request volume and turnaround time          | Better tracking and decisions                  |
