

1.2 Define Problem Statements

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer Ideation Phase

Customer Problem Statement

Standard laptop requests are handled through emails and manual approvals. This causes delays, repeated follow-ups and no visibility for the requester, while the procurement team spends time on repetitive, low-value work.

Problem Statement Template

Problem	I am	I'm trying to	But	Because	Which makes me feel
PS-1	An employee needing a laptop	Get a standard laptop quickly	The request takes days and I cannot see its status	Approvals are manual and chased by email	Frustrated and unproductive
PS-2	A line manager	Approve my team's laptop requests	Requests get buried in my inbox	There is no single approval queue or reminder	Overloaded and unsure what is pending
PS-3	An IT / procurement admin	Process standard laptop orders	I create POs and update records by hand	No automation links request, approval and PO	Stretched and worried about errors

Problem Statement Summary

Ref	Who is affected	Core problem	Impact
PS-1	Employees	Slow, opaque laptop request process	Lost productivity, poor experience
PS-2	Managers	Manual approval chasing	Delayed approvals
PS-3	IT / Procurement	Manual PO and record creation	Errors, high manual effort
