

Solution Architecture

Project: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

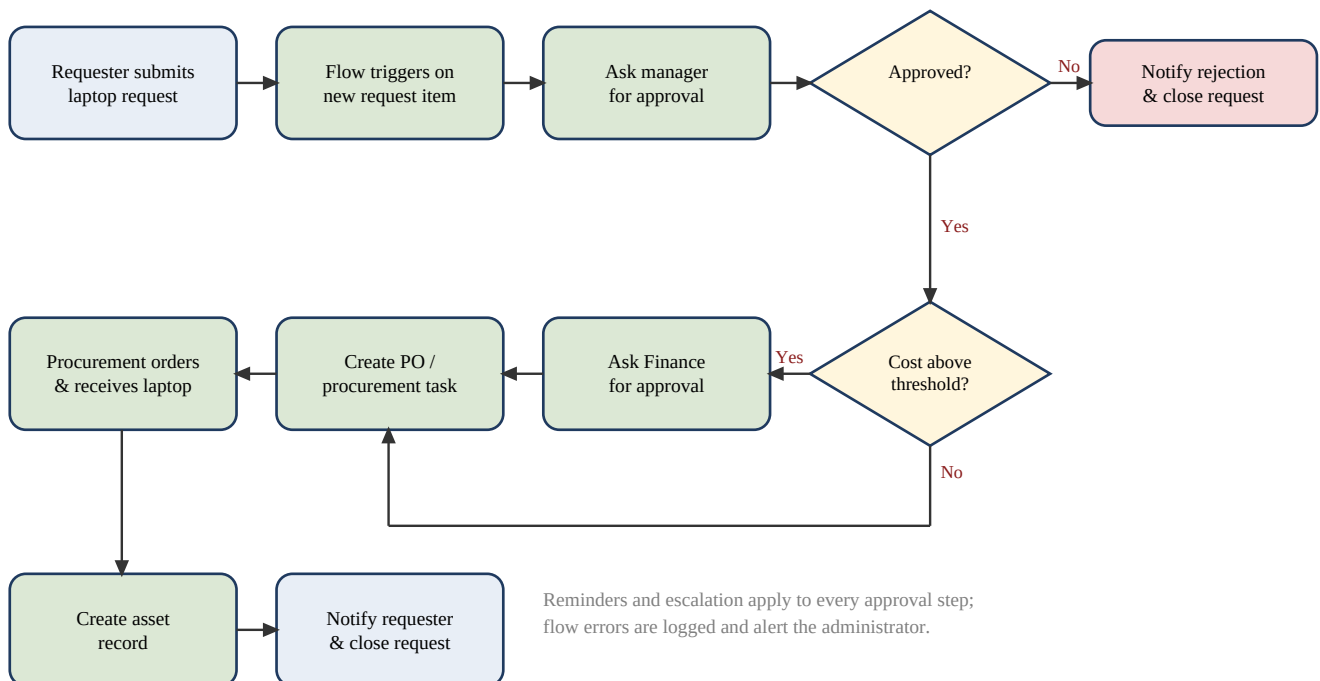

Phase: 3. Project Design Phase

This document shows the layers, the components and the flow logic of the laptop-order automation on ServiceNow.

1. Layered Architecture

2. Flow Logic

3. Component Description

Component	Description
Standard Laptop Catalog Item	Form with laptop model, quantity, cost centre, justification and needed-by date.
Laptop Order Flow	Main Flow Designer flow triggered when a requested item is created.
Get Approval subflow	Reusable subflow for manager and Finance approvals with reminder and escalation logic.
Procurement task / PO	Record created after approval with request data mapped in.
Asset record	Created on receipt; linked to requester and request item.
System properties	Store cost threshold, SLA hours and notification settings.
Notifications	Email and portal messages for each stage.
Roles and ACLs	Requester, Manager, Finance, Procurement, Administrator access control.

4. Data Mapping

From (request item)	To (procurement task / PO)
Requested for / department	Requester and cost centre
Laptop model and quantity	PO line item
Estimated cost	PO amount
Needed-by date	Expected delivery date
Approval comments	Task work notes

5. Error Handling and Security

- Every flow action has error handling; failures are logged and the administrator is notified.
- Approvals are limited to the assigned approver; procurement tables are protected by ACLs.
- All changes move between instances using update sets.
